

Another First for CoolSculpting®

The first and only treatment of its kind for improved appearance of lax tissue

The CoolSculpting® treatment is the first and only nonsurgical fat reduction technology to be FDA cleared for improved appearance of lax tissue in conjunction with submental fat treatments.

Clinically proven

An 18-week clinical study of the submental area found:

77% of patients visibly showed improved tissue laxity

75% of patients reported their chin look more toned

Before

12 weeks after second CoolSculpting® session
(reduction in area of 353 mm²)

Before

12 weeks after second CoolSculpting® session
(reduction in area of 199 mm²)

The CoolMini® applicator is designed to treat the submental area.

In the U.S., the CoolSculpting® procedure is FDA-cleared for the treatment of visible fat bulges in the submental area, thigh, abdomen and flank, along with bra fat, back fat, underneath the buttocks (also known as banana roll), and upper arm. It is also FDA-cleared to affect the appearance of lax tissue with submental area treatments.
